Claims 88-91,93-108 and 110-113 are cancelled.

Allowable Subject Matter

4. The following is a statement of reasons for the indication of allowable subject matter: Souissi (US Patent 6,920,171) discloses transmitting packets with a time and frequency hopping scheme within two or more piconets. Panaski(EP 1119112) discloses a master and slave dwelling hopping pattern which consist of time and

frequency combination. Kostick et al. (US patent 6,549,784) discloses replacing frequency hop patterns determining which one or more frequencies should be replaced with system frequencies. Mattisson (US Patent 6,246,713) discloses having a plurality of users being allocated different frequency bands. Laroia et al. (US Patent 6,553,019) discloses having sequence generator whereby generates the frequency hopping sequences. Lariora et al. further discloses using a Latin Square sequence function using prime a number to generate a hop sequence within a dwell time interval. However, in combination the prior art fails to anticipate or render obvious the following recited specific features of claims 1,13 and 65 limitations : "utilizing a unique frequency hopping sequence it certainly cannot be guaranteed that during a time span that any two different piconets can utilize two bands together for a collective time no longer than the longest dwell time within such group of dwell times. "

5. Watanabe et al. (US Patent 6,731,939) discloses having time and frequency hopping scheme associated with a plurality of piconets. Karol ("Time-Frequency-Code Slicing: Efficiently Allocating the Communications spectrum to Multirate Users) discloses having time-frequency-code slicing technique whereby a time-frequency code corresponds to a designated frequency band.

However, in combination the prior art fails to anticipate or render obvious the following recited specific features of claim 24 limitations: "the second code is unique from the first code and at least one band is present in the first sequence that is not

present in the second sequence, wherein in response to interference, an extra band is substituted for an existing band of the first sequence of designated bands or the second sequence of designated bands, wherein before substituting, the code does not correspond to the extra band.”

6. Shellhammer et al. (US Patent 7,039,358) discloses having a Bluetooth network comprised of Bluetooth devices such as master and a plurality of slave devices. Shellhammer et al. further discloses having a plurality of piconets whereby the Bluetooth devices transmit packets during a dwell on a given frequency. Zyren (US Patent 6,377,608) discloses having a WLAN infrastructure comprised of a plurality of piconets whereby a multiple of devices are operating on same frequency band. However, in combination the prior art fails to anticipate or render obvious the following recited specific features of claim 41, similar claims 29,53 and 77 limitations: “each piconet in the set of piconets has a unique code compared to the other piconets in the set of piconets, wherein the each unique code corresponds to a sequence of dwell times and bands including the first band, wherein the sequence includes at least one group of dwell times; and substituting an extra band for the first band, wherein before substituting, the unique codes do not correspond to the extra band.”

Prior Art

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bantz et al. (US Patent 5,394,433).

Karaoguz (PG PUB 2004/0199686).
